3.	Ananya Kesharwani	25	25BCY10281	ananya.25bcy10281@vitbhopal.ac.in	9691135358

Idea

1. Real-time

Our tool provides **instant feedback** on password strength, helping users improve their habits and enhance overall security.

2. Core Features

It includes a **live strength meter** and personalized suggestions to ensure users choose secure passwords every time.

CYBER CARNIVAL

Tech Stack Behind Our Password Analyzer

1. Frontend

Built with **React** and **TypeScript** for efficiency.

2. Libraries

Leveraging **zxcvbn** for password strength evaluation.

3. Deployment

Seamless hosting with **Vercel** and **GitHub**.

4. Benefits

Fast, cost-effective, and **highly scalable** solutions.

CYBER CARNIVAL

Methodology and process for implementation

PHASE 1	PHASE 2	PHASE 3
Initial development of password input, strength meter, and user suggestions features.	Introduction of crack estimator, mistakes gallery, and a privacy banner for users.	Implementation of the password generator, brute-force demo, and best practices education.

Feasibility: Technical and Economic Viability

- ***Technical*** : Proven technology offers a solid foundation.
- ***Economic*** : Zero costs ensure accessibility to all users.
- ***Operational*** : Browser-based, ensuring easy scalability for users.

Impact and Benefits

- ***User Empowerment*** : Users become more informed and secure online.
- ***Reduced Breaches*** : Decreased data breaches through improved password practices.
